

Data Scientist (AI/ML)

Entry Level | Full-Time | Remote / Hybrid

About the Role

We are looking for an entry-level Data Scientist (AI/ML) to join our growing data team. You'll work on building and deploying machine learning models, developing LLM-powered features, and turning data into actionable insights that directly inform product and business decisions. This role is a strong fit for someone early in their career who has hands-on project experience and a genuine curiosity for applied AI/ML.

Responsibilities

- Design, build, and evaluate machine learning models for prediction, classification, and forecasting tasks
- Develop and maintain LLM-powered features, including retrieval-augmented generation (RAG) pipelines and function-calling agents
- Write clean, production-quality Python code and collaborate with engineers to deploy models
- Analyze large datasets using SQL and Python to identify trends and generate insights for stakeholders
- Build and maintain data pipelines, including preprocessing, feature engineering, and validation steps
- Communicate findings clearly to both technical and non-technical stakeholders

Required Qualifications

- Bachelor's degree in Computer Science, Data Science, Engineering, or a related field
- Strong proficiency in Python and SQL
- Solid understanding of core machine learning concepts: regression, classification, clustering, and model evaluation
- Experience with common ML libraries such as scikit-learn, TensorFlow, or XGBoost
- Ability to clearly explain technical concepts and results to non-technical audiences

Preferred Qualifications

- Experience building LLM-based systems, including RAG pipelines, prompt engineering, or function-calling agents
- Familiarity with vector databases and similarity search (e.g. FAISS, Pinecone, or similar)
- Experience with cloud platforms (AWS, GCP, or Azure)
- Exposure to MLOps practices: model deployment, monitoring, or CI/CD for ML systems
- Experience with data visualization tools such as Plotly, Tableau, or Power BI
- Familiarity with MongoDB or other NoSQL databases

What We Offer

Competitive entry-level salary, mentorship from senior data scientists and ML engineers, hands-on exposure to production LLM systems, and a collaborative, fast-moving team environment.
